

I Claim:

1. Masticatory-Releasable Dentifrice Article comprising:

(A) a teethbrushing session dosage of selectable dentifrice; and
(B) said dosage being initially confined within a surrounding envelope of relatively-thin readily-masticatable and conventional hydrophilic/salivascopic material to provide a said Dentifrice Article and thereby enabling a teethbrushing person to serially: charge a said Dentifrice Article into one's oral cavity; then to masticate said Dentifrice Article to thereby release said dentifrice dosage; and finally enabling conventional teethbrushing by said released dentifrice dosage.

2. The Masticatory-Releasable Dentifrice Article of Claim 1 wherein the said surrounding envelope is constructed throughout of a conventional hydrophilic/salivascopic and safely ingestible gelatinous material.

3. The Dentifrice Article of Claim 2 wherein the surrounding envelope is of globular shape and along an axis thereof is of circularly annular shapes.

4. The Dentifrice Article of Claim 3 wherein the temporarily confined dentifrice dosage is of the semi-solid plastic type.

5. The Dentifrice Article of Claim 3 wherein the temporarily confined dentifrice-dosage is of the powdered-solid type.

6. The Dentifrice Article of Claim 3 upgraded into an Articles Container wherein there is a plurality of said Dentifrice Articles storablely charged within a removably-capped vessel, whereby a teethbrushing person might withdraw one or more of said plurality at a single teethbrushing session.

7. The Masticatory-Releasable Dentifrice Article of Claim 2 wherein the dentifrice dosage ' surrounding envelope in plan view is of polygonal shape and comprises two parallel and opposed layers of a said gelatinous material, and said two layers being fused at the said polygonal periphery in surrounding relationship to said dentifrice dosage.

8. The Masticary-Releasable Dentifrice Article of Claim 7 wherein the temporarily confined dentifrice dosage is of the semi-solid plastic type.

9. The Masticatory-Releasable Dentifrice Article of Claim 7 wherein upgraded into an Articles-Container wherein there is a plurality of said Dentifrice Articles storably charged within a removably-capped vessel, whereby a teethbrushing person mifgt withdraw one or more of said plurality Articles at a single teethbrushing session.
